I. Parts description

A. Registration and Login Page

1. Name - an input box where the user can enter their login username or the username they wish to register as.
2. Password - an input box where the user can enter their login password or the password they wish to register with.
3. Login - a button that allows the user to access their account information, given the username and password the user entered matches the registered username and password.
4. Register - a button that allows the user to create a private account using their desired username and password.

II. Instructions

A. Registration

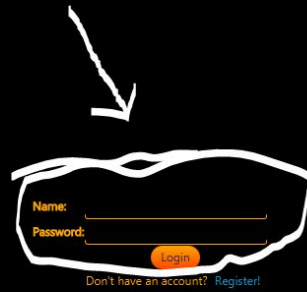

1. Open the executable program.
2. In the middle of the screen, you will find the registration (and login) prompt.
3. Enter your desired username in the input box labeled Name.
 - a) If the username is already taken by another user, you will be prompted to re-enter a different username.
4. Enter your unique password in the input box labeled Password

- a) Although the password will be heavily encrypted for privacy, it is recommended to have a strong, unique password.
5. Click the Register button to finalize the registration

B. Login

1. Open the executable program.
2. In the middle of the screen, you will find the login (and registration) prompt.
3. Enter your registered username in the input box labeled Name.
4. Enter the unique password associated with your username in the input box labeled Password.
5. Click the Login button to access your account.
 - a) If the username or password does not match, you will be prompted to re-enter the correct username or password.
